EXCLUSIVE EXECUTIVE DINNER BY INVITATION ONLY

2024: THE YEAR OF SCALING SECURITY EFFICIENCIES

DATE & LOCATION

NYC, NY

June 6th, 2024

Under the "assume breach" mentality that has been adopted by security leaders, it's apparent that East-West or Lateral security is the new battleground for many organizations, especially with the inherent complexities of hybrid and multi-cloud infrastructure.

Today, 93 percent of malware hides behind encrypted traffic. In a recent report, more than 70 percent of the 1,000 IT and security chiefs surveyed said they currently allow encrypted data to flow freely across their infrastructure. Efficiency in dealing with encrypted traffic will be a top priority for security teams this year.

As we enter 2024, the mantra of doing more with less has never been truer. The good news is when organizations prioritize and invest appropriately, technology has the power to maximize efficiencies by extending resources and assisting security leaders in navigating growing complexity. From AIOps to deep observability to threat detection, security innovations have the potential to keep pace with the expanding attack surface and enable SecOps and IT to work together and successfully secure the enterprise.

WE WILL DISCUSS:

- ▶ How to gain deep observability, enhance performance monitoring, and strengthen your organization's security posture.
- ▶ How to access and efficiently deliver network-derived intelligence from East-West traffic across hybrid cloud infrastructure to various tools that are being used for security and performance monitoring.
- ▶ How to extend the value your existing investments in security and monitoring tools, in order to make them more efficient and effective.
- ▶ Leveraging AIOps to reduce full dependencies on security operations center (SOC) analysts and automate tasks efficiently.
